

Today's session: Python Tutorial (comments, variable, datatypes, type conversion, I/O, import, Operator, namespace)

Comments are two types in Python: single line comment & multi line comment.

```
In [1]: #single line comment
#we are creating variable
a=2
print(a)

2
```

```
In [3]: #now we are creating multiple line comment:
b=2
'''Hi hello how are you
so, you are good
okay take care'''
print(b)

2
```

```
In [5]: #Now, can we change variable? yes
b=5
print(b)
#here b value will change from 2 to 5

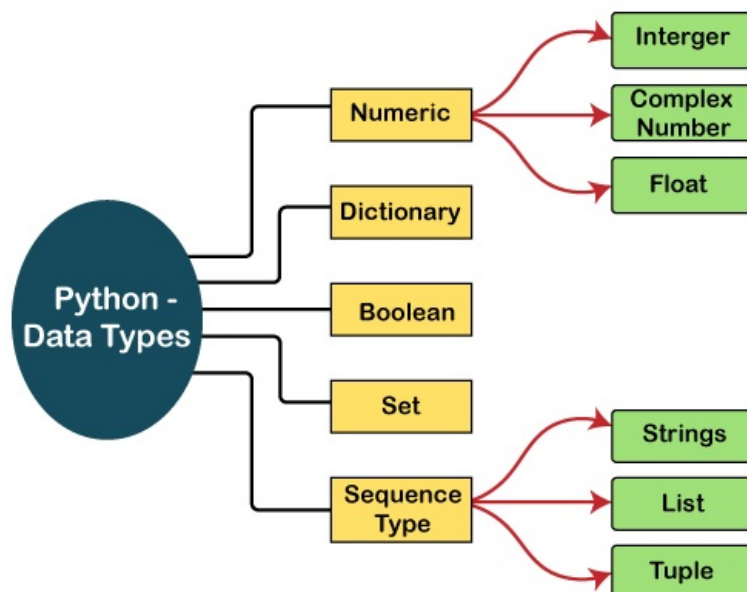

5
```

```
In [6]: #lets see few more example of variable
a=2
b=3.5
c="Ram"
```

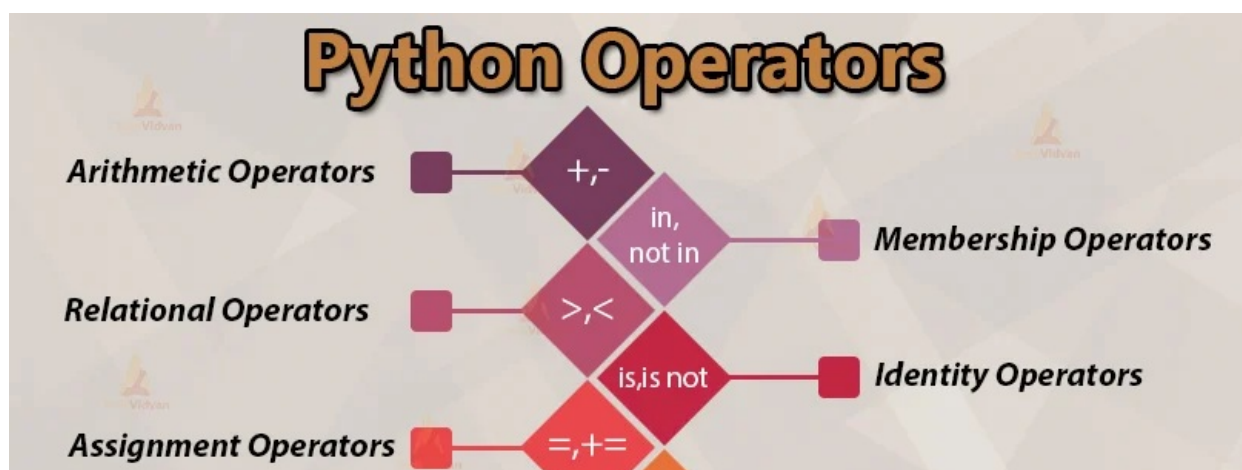

```
In [7]: print(c)

Ram
```

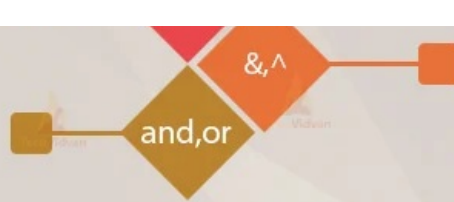

Python Data Types

```
In [1]: #Here I am just showing image, we will practice separately in next tutorial, similar for operator, just giving
```

Logical Operators

Bitwise Operators
